YOU NEED THEM BOTH

It's never been about the tape measure versus the laser measure among professional users. Tape measures are here to stay. There's a place for both, but the necessity for the laser measure continues to grow. If the lengths involved in framing, flooring or hallway projects exceed several feet, the laser measure is more accurate and easier to use. But both tape measure and laser measure merit a dedicated spot on the tool belt.

LINES OF DISTINCTION

Green beam and red beam lasers offer users the tools to meet a full spectrum of alignment and leveling applications. Green beam technology is particularly effective in bright, ambient lighting conditions where the color is up to 4× more visible to the human eye. Red beam represents the industry standard in laser products, providing a clear beam that's easy to use in varied interior applications. The beams can be in vertical, horizontal or cross-line modes that project two lines independently or together. Now there are two options that allow users to get the most out of laser technology.
